## SAVED ARM

Plucky Woman Terribly Burned-Wouldn't Allow Amputation.

Most people in Michigan will be in-terested in the case of Mrs. A. P. Brown of Dryden, N. Y., whose husband says: "My wife burned her arm so the mus-cles projected like a shelf. The arm was so stiff she could not straighten it. Physicians, failing to heal the arm, wished to operate. We refused and treated it with Balsam of Myrrh. She can use the arm extensively—Balsam of Myrrh saved the arm."

#### Work of County Agriculturist

The most important event in last week's activities was the meeting of the Executive Board at this office on Friday. Not only were members of the Board present, but several interested parties from different sections of the county who have not attended before were at the meeting and took an active part. The meeting was called primarily for the purpose of developing some plan for alleviating the bean and potato seed situation the coming spring. Correspondence and samples which had been received from the county agents of Alpena and Newago counties were submitted to those present for their consideration and, after thoroughly discussing the subject, they decided to arrange for the purchase of 200 bushels of white pea beans and 400 bushels of Green Mountain potatoes from Newago county. The beans are the result of the careful selection of the progeny of a single plant with which the grower started the work a few years ago. He has selected for hardiness, freedom from disease, and yield and apparently has been well rewarded for his efforts The potatoes which it was decided to purchase are of the same stock which won the sweepstakes at the State and National Potato Show at Grand Rapids last month. The beans delivered at Port Huron will cost \$4.50, potatoes \$1.50 per bushel. The County Agent was instructed to assist the Secretary in taking care of orders for spring de-livery from the people of the county. This office was also instructed to fill orders for these products in the same order that the requests were registered. a deposit of only \$1.00 per bushel for the beans and 25 cts per bushel for the potatoes being required at the time the order was booked. The following men be failed to bring relief to those sorely attended the meeting: A. J. Smith and Albert Tosch, of Capac; H. P. Ohmer and W. A. Cavanagh, of Yale; J. J. Norman, of Blaine; George Fuller, of Jeddo; Joseph Fogarty, of Columbus; D. E. Lockwood, A. E. Stevenson and M. D. Baldwin, of Port Huron. The attendance was very satisfactory, especially considering the fact that several

were kept away on account of sickness.
With the exception of one day the entire week was spent in the office. Wednesday was occupied with the Pomona Grange meeting at Spring Hill hall north of Avoca. Owing to the exceedingly stormy morning, the attendance was very small, but an interesting, informal meeting was enjoyed and acquaintances were made which are prized very highly by this office. C. L. Brody, County Agent

### Coming Events Cast Their Shadows Before

By F. A. MITCHEL

Nicolal Morilli when that war broke out between France and Austria in which Italy joined as an ally of France was a young citizen of Rome. When Morilli signified his intention to enter the Italian army his friends shook their heads, declaring that there was nothing of the soldier in him.

"You had better study for the church," they said to him, "or, rather, secure a position as professor in a university. You will be studying the clouds some fine day, and while you are wondering whence they come and where they are drifting a cannon ball will come along and take off your head."

One person, however, was confident that Nicolal would return a hero. This was Bianca Tarantola, his sweetheart. The young recruit, being of a fanciful turn of mind, must needs select that arm of the service for which he was least fitted. Though he had never been on a horse, he enlisted in a cavairy regiment. As luck would have it, the company to which he belonged was as signed to a general's headquarters to act as couriers and a guard for their commander's person. One day when the general called upon Nicolal to carry a message the private, turning his horse, suddenly lost his balance and fell to the ground. The general, see ing that the youngster was unfitted to go dashing about as a courier, made him his bugler, in which position he would be expected to stick to the general. Nicolni didn't know how to sound a bugle, but that didn't matter.

The general received an order on day to march his command to re-enforce the allies who were fighting the Austrians some miles distant. Losing his way in a wood, he brought his men to a halt in dire distress of mind. If pressed he would be in disgrace Nicolai sat on his horse looking at the sky as if in a dream.

"Ride out into the open," cried the general to him impatiently, "and see if you can get a view to help us to find our way! "I think, general," said Nicolai, point-

ing, "we should go in that direction." "Why so?"

"I see birds hovering." "What has that to do with it?" "They are waiting to get at the

The general strained his eyes for the birds, then gave an order to advance in an entirely different direction from which he had been moving. He reacher the battlefield just in time to save the allies from defeat.

On another occasion the general was hard pressed by the Austrians, with a is sentor partner of the firm of F. J. river at his back, and if he did not Chency & Co., doing business in the find means of crossing before his en-City of Toledo, County and State afore-emy could bring up re-enforcements he would be captured with his whole com-

> "Look up at the sky," he said to Nicolal, "and see if you can tell me

"This time, general," replied the young man, "I have been looking at the ground for a means of crossing." "Well, it matters not to me whether

you look at the sky or the ground. If you show me how to get across the river you shall be a captain and my ald-de-camp."

"These rocks," said Nicolai, "slant in such a direction and over there in such another direction as to indicate that somewhat farther down they will lie flat instead of upright on the river the evidence of in good records. bed. If so we are liable to find a ford."

"Ride on and find out," the general ordered.

The commander rode after instead of before his bugler, who kept his eyes on exposed rock ledges till he came to a point where the river widened. Noting the angle of the ledge, Nicolai rode into the water and across. When be returned the general, who had been watching him, had given an order to retreat, and in a few minutes a column was crossing by the ford.

Soon after getting his men over the river the general was re-enforced and desired to return and attack the enemy. The Austrians had meanwhile fortifled the opposite bank, and the water had risen to such a height as to render the ford much more difficult. The general called for Nicolai and said:

"You have looked into the sky and into the ground to a purpose. I wish it is well known when a vessel is comto get my men back across the river. ing down before a gale of wind from Is there any other direction you can the islands, logging fourteen to sixteen look to find a way?"

"Yes, general; I can look straight be fore me. Do you see that cotton mill up the stream on the opposite bank?"

"And the man on it fishing?"

"Yes. What of it?" "Do you notice that his weight has no perceptible effect on its bouyancy?

"I see a large number of bales under a shed in the rear of the mill. I think that if you build a raft and send a force of mechanics across they can construct a pontoon bridge of those

general's army crossed on it. "In another half century," said the general to his aid, "such men as you will be generals and such as I will be

fighting in the ranks." Nicoli returned to Rome a colonel and recommended for a general officer. Bianca was not at all surprised. The only comment was, "I told you

# LIKE A SUBMARINE

The Fur Seal In Many Ways Resembles an Undersea Boat.

ITS HABITS IN THE WATER.

Although It Can Swim Only When Submerged and Must Rise to the Surface Every Few Minutes, It Is a Marvel of Speed.

We have come to regard the soaring albatross or the condor as the proto type of the aeroplane. When we look for a natural model for the submarine we find it well made in the body of the fur seal and fully suggested by its travels there only when wholly sub-

Unlike, however, the "unterseebote," the fur seal is not fitted for swimming on the surface; it only rises there to survey, to breathe and to sleep. It never attempts to swim with head above water on any course, no matter how short. It rises when undisturbed or not alarmed, looks about with head and neck well stretched up above the surface of the sea, fills its lungs with air (literally compressed), turns its head down and with its powerful auterior flippers drives itself below the surface to the depth of five or ten feet. then ahead on that level. Thus submerged the body of the seal glides through the water as swiftly as a swallow in the air-it is a vanishing streak to our eyes.

How long it remains thus submerged when traveling no one has any definite knowledge, but the best consensus of opinion gives it a rise at intervals of every three or four minutes to breathe -that is, a pause of less than two or three seconds, with barely more than its nose and eyes above the surface, for exhalation and renewed inhalation -when down goes the trim body to speed ahead again.

When our submarines were first brought out a trip of more than 300 miles from base was the utmost limit of their cruising. Today they have been so perfected that they can cruise safely more than 3,000 miles from that base. Therefore in this connection it is interesting to know that the fur seal makes a submarine journey in the north Pacific ocean of more than 5,000 miles from its base on the Pribilof Islands, in Bering sea, and then returns.

An animal which can not only make steer its course over an uncharted waste from point to point, mouth by month, with positive regularity and in perfect time, must be a fine type of awimming machine, and it is.

There is to be observed a close resemblance between the cigar shaped submarine boat and the body form of the fur seal. As we view them laterally, this resemblance is complete. They are both driven ahead by feathering screws, and they are both kept on the level of their submerged course at a given distance below the surface by

Then we observe that the periscope, to which the submarine craft owes all of its efficiency, is duplicated exactly by the seal's nose and eyes and which are all that it ever lifts above the surface when startled and in flight of passage.

Again we note that the fur seal as a submarine has a great advantage over the human bont-it has eyes that can look ahead and around under water-how far we do not know, but it is reasonable to assume that the seal's eye can see as far under water as the eve of a camera can, which we have

Then, too, it also has an acute sense of hearing under sea, for we know that the whirring of a propeller's screw will drive all the seals away for miles around a steamer. We know that because some of the early pelagic sealing vessels were fitted with small aux-Hary screws, and these, when put into use, had to be removed.

With reference to the powers of destruction, of course our fur seal boat has no torpedo tubes, but it can and does "shoot its mouth off" at fish with a deadly certainty.

In this connection it is interesting to note that seals do not catch fish by pursuit of them-not at all. They shoot down from above upon the backs or up from below to strike at the bel-Hes of their finny prey.

How fast these phocine submarines can speed up under the stimulus of excitement or fear no one knows. But knots, that a bevy of fur seals will often follow the ship for hours and repeatedly swim by it, swim around it and then renew the chase and circling of it.-Henry W. Elliott in New York

## Mrs. Borland's Relative .

By MAY C. ETHERIDGE

Gilbraith. Tom being master of a tramp steamer and at sea nearly all the time, be hoped that a little stranger would soon happen that way to keep his wife company during his disence.

Tom's communications from home were very Irregular, because his Hinerary was often uncertain. If on arriving at one point it would pay better to go to another than the one he had expected to steer for he would method of progression in the sea, for it alter his plans, so that letters addressed according to instructions would lie in the postoffice unclaimed. His wife heard from him with as much regularity as could be expected from a sailor, but sometimes months would Intervene between his receipt of letters from her.

The Borland home was just within the entrance to a narrow bay into which Captain Borland on his return always took his ship and docked her. When he came from the northward, as he usually did, on turning into the harbor he could see his little home nes-tling up on the heights, and when his wife knew that he was due she would be on the lookout for him. Then how joyful to her was the sight of the ship in which he came and to him the welcome he saw waving from an upper window. But if soon after rounding in he didn't see that signal he was seized with fear that something of grievous nature had happened.

On one of Captain Borland's voyages after having been away almost year and having changed his timer ary so often that he had not heard from his wife for months, be turned the bluff at the entrance of the bay anxiously. He had found an opportunity to send a letter to her advising her of the probable time of his arrival and hoping that within a short time after coming into view of his home he would see the usual signal

When rounding the bluff he stood o deck, binoculars in hand, watching for what would relieve his auxiety and assure him that his wife was living and well. But, though he raised his glasses often, he was every time disappointed. At last when he reached a point nearest to his house the figure such an extended journey, but can of a woman appeared on the porch and waved, but with the assistance of his glasses he saw that it was not that of his wife.

Captain Borland bardly knew what to think of all this. But he surmised either that his wife was dead, that she was III or that something had occurred to take her away from home. Anxious ly he sailed on to a point near the dock and, after dropping an hor, entered a boat with six sallors to pull him to a point on the shore just below his house. As soon as the hout's nose scraped the ground he leaped ashore and walked hastily up the incline.

He was met at his door by a woman in the uniform of a trained norse, who seemed disposed to black his entrance till be informed her that he was at his own home. Then she told him tint his wife was ill, but not dangerously ill: that the doctor was with her, that the patient had been informed of his expected arrival and that if he came before the doctor left he was to wait.

The captain herant to fire questions at the captain piece of pareit of mid state of Michigan, for the doctor left he was to wait.
